

STEPS TO SET UP YOUR GMOD SERVER

1 DOWNLOAD AND INSTALL STEAMCMD

Download and extract the SteamCMD files from the Steam website

2 GENERATE A GSLT LOGIN TOKEN

Create a new server on Gary's MOD App

3 INSTALL AND CONFIGURE THE SERVER FILES

Update and validate Garry's Mod server files with `app_update 4020 validate`.

4 BASIC CONFIGURATION

Edit the `server.cfg` file using a text editor to set basic server settings

5 PORT FORWARDING

This is useful for allowing external connections to your server.

6 START AND CONNECT TO YOUR SERVER

Connect to your server using the console and your local IP address.
